User guide

Additional Notes:

- Be sure to install a rePatch compatibility pack if your Vita is on 3.60 or have reF00D plugin installed.
- The game does not like VSH Menu, normal overclock clock plugins, framecounter. Disable them or add an exception on your tai config file. Or better use a real overclock plugin like LOLIcon overclock plugin since it loads the game fine when enabled.
- On 3.60/3.65 Vita TV the DLC sometimes is not detected and will only be detected randomly after a few exiting and running the game. In the contrary it was always detected on 3.68 vita fat and slim. So think for a bit if you want DLC on you Vita TV since the game won't load your save if the DLC is not detected.
